

HF Radio-telephone Interface

Radio Operator Console

RTU-292 HF Radio/Telephone Interface Unit

The RTU-292 HF SSB Radio/Telephone Interface Unit provides trouble-free automatic connection between a radio system and a telephone system or other two-wire line. The unit is suited for use with HF, VHF, UHF, or satellite systems and is applicable to full-duplex or half-duplex modes. The unit incorporates a full-featured telephone set and monitor speaker.

Radio Operator Console FBT 126

The FBT-126 Radio Operator Console serves as a system component for command control positions of a works management system having small, medium or large capacities.

Applications include police and security organisations as well as fire departments or other users for remote control of stationary radio installations.
